Career Objective

Passionate MCA candidate specializing in Generative AI, with strong exposure in full-stack development, cloud-native systems, and AI/LLM integrations. Demonstrated ability to architect production-grade solutions — from real-time MCP servers interfacing with financial markets to cloud-deployed automation on GCP. Seeking an SDE role to leverage expertise in Python, JavaScript, and distributed systems to build high-impact scalable products.

Education

SRM Institute Of Science and Technology **June 2025 – July 2027**
Master of Computer Applications – Gen AI Specialization *Chennai, Tamil Nadu*

Aditya Degree College **June 2022 – March 2025**
Bachelor of Computer Applications *Visakhapatnam, Andhra Pradesh*

Relevant Coursework

- Data Structures & Algorithms
- Database Management
- Internet Technology
- Software Methodology
- Artificial Intelligence
- System Design
- Web Development
- Computer Architecture
- Algorithms Analysis

Experience

Unessa Foundation **April 2026 – Present**
AI/ML Engineer Intern *Remote*

- Architected and deployed a production-grade AI/ML service using FastAPI and Uvicorn, integrating Model Context Protocol (MCP) for structured LLM tool-calling across multi-step agentic workflows.
- Built and exposed RESTful endpoints via ASP.NET Web API layer, enabling seamless cross-platform communication between Python inference services and enterprise application consumers.
- Developed a React.js frontend dashboard for real-time model interaction and inference monitoring, integrated with the FastAPI backend through async API calls and dynamic state management.
- Containerized and managed end-to-end software deployment pipelines on remote Linux infrastructure, ensuring consistent environment configuration and zero-downtime service delivery.

Technical Skills

Languages: Python, Java, C, Go, SQL, JavaScript, HTML/CSS

Frameworks/Libraries: Model Context Protocol (MCP), Spring Boot, FastAPI, Node.js, JUnit

Developer Tools: Git/GitHub, Docker, Jenkins, VS Code, Android Studio, Eclipse

Cloud & Platforms: Google Cloud Platform (GCP), Linux, WordPress

Projects

IndiaQuant MCP | *Python, SQLite, NumPy, SciPy, Model Context Protocol* **March 2026**

- Built a real-time MCP server integrating LLMs with the NSE Indian Stock Market, implementing the Black-Scholes Model from scratch to compute Option Greeks (Delta, Gamma, Theta, Vega).
- Designed a modular backend with dedicated modules for live market data ingestion, RSI/Volume signal generation, and real-time sector performance mapping.
- Enabled automated market scanning and signal execution within Claude Desktop via a persistent SQLite-backed virtual portfolio with real-time P&L tracking.

VELA – Voice-Controlled AI Agent | *Python, Whisper, Groq, LLaMA, React, FastAPI* **May 2026**

- Engineered an end-to-end voice AI pipeline integrating OpenAI Whisper for speech-to-text transcription with LLaMA inference served via Groq API, achieving low-latency conversational responses.
- Designed a custom React frontend with glassmorphism aesthetics, enabling real-time voice interaction through WebSocket-based audio streaming and dynamic response rendering.
- Exposed agent capabilities via a FastAPI backend, structuring the system as a modular agentic architecture with clean separation between STT, LLM inference, and UI layers.

Certifications

- Python AIML Internship Certificate — Ulearn
- Web Development Certificate — NSDC, Skill India

Leadership / Extracurricular

Google Developer Group (GDG) **May 2022 – Present**
Active Software Volunteer *Visakhapatnam, India*
